## Announcement

### **Strengthening of ETAG's expertise in the regulatory field**

We proudly announce the joining of Prof. Dr. Clemens Allgaier from ACA-pharma concept GmbH, a professional consulting company specialized in supporting the pharmaceutical, medical device, cosmetic and chemical industry in their efforts to develop effective and safe products by providing preclinical / toxicological and clinical expert services of highest quality. In close collaboration with ETAG, ACA-pharma concept GmbH can accompany your projects from their first steps through to their successful completion. As required, we establish expert teams with the optimal composition and subject matter expertise to fully achieve client objectives. This guarantees flexibility, accuracy, consistency and high quality, and also allows adapting easily to your special requests. One of our core competences is supporting pharmaceutical and biotech companies - in particular start-ups - in developing effective and safe medicinal products by providing preclinical and clinical expert services of highest quality. The services also include veterinary medicinal products and food supplements for animals. We are specialized in the development and CE-marking of medical devices for the European market, comprising in particular those medical devices incorporating an ancillary drug substance and in vitro diagnostics. Based on our wide experience, we support companies in the registration of chemicals under the current legislation. Starting from the identification of information gaps depending on the tonnage band of the chemical, required studies are assigned and monitored considering intelligent testing strategies to avoid unnecessary testing and costs. Full registration documents (technical dossier, chemical safety report) are compiled. We may serve as Third Party Representative or as Only Representative for manufactures outside the EU.
